RE: Confirmation of no ruminant protein contamination

To whom it may concern,

I am writing to declare that none of the dairy feed pellets produced at our stock feed mill have any ruminant protein added.

Our dairy feed pellets are suitable for feeding to sheep, cattle, deer, goats and all other ruminant animals.

Both of our feed mills are ruminant protein free. We ban our trucks from carting or handling any ruminant protein material – including both pellets and/or raw materials containing ruminant protein.

Our feed mills are also banned from using any of the following materials: fish meal, feather meal, tallow, egg or products containing eggs or egg byproducts.

The Mangatawhiri feed mill is an NZFMA registered and audited "Feed Safe" site.

For further information, please feel free to contact me on my cell phone number below.
